Since the amount of unwanted E-mails still increases traditional solutions like software and appliances against SPAM and viruses are no longer sufficient. CleanPort Managed E-Mail Security offers the most advanced solution of this moment. CleanPort uses patented technology, and keeps on innovating by constantly adding newly developed technology and techniques like Advanced Greylisting en HICAR (Heuristic Character Recognition) to the service.

Key Features

1. No need for investments in hardware, software and labour

2. Set-up is very easy, as well as working with our user-friendly interface

3. Adjustable at all levels; domain, department and user

4. CleanPort operates at a safe distance and keeps SPAM and viruses away from your organization's network

5. The most advanced technology with the heuristic ProTAG en HICAR

6. Protects against new viruses and SPAM by using heuristic programs

7. Total control through the MyAccount-interface over the set-up, reports & statistics and quarantine

8. Always the latest technology and updates in real-time, without having to pay extra

9. No set up costs, only the minimal monthly costs per E-mail-user

10. The MyAccount- interface can be adjusted to your corporate identity

Spam

Almost 90 % of all E-mail traffic consists of SPAM. This is not only inconvenient, but it also decreases productivity of employees within organizations. The ever increasing flow of SPAM also requires a lot of server capacity. This causes extra costs and can diminish the speed of the Email-traffic.
The danger of identity-theft due to SPAM also increases. Criminals try to get hold of personal log-in codes and passwords by sending Email imitating the corporate identity of companies, such as banks.

Viruses

A virus encoded in an Email can penetrate your organization's network. Once inside, it can shut down entire networks, and as a result frustrate the output of the organization. This does not only affect your own productivity, but also that of your clients. With all the consequences for your companies reputation.

Unwanted Content

Sometimes an E-mail contains unwanted content or enclosures like .mp3 or .exe-files. This might cause security problems, but it also takes a lot of disk space on your server

How it works

CleanPort is not software, but a patented Managed Service. Therefore CleanPort is not installed on your desktop or network, but works by diverting your E-mail traffic to CleanPort simply by redirecting the MX-record of your mail server. As a result your Email is filtered and scanned by CleanPort at a safe distance from your company's network, while unwanted E-mail is quarantined, and the rest of the mail safely delivered.
