- Personal emergency alarms
- Phone location tracking
- Geo-fencing
- Phone locking

Alerting

- Dangerous activity
- Exceed cost and time limits
- Email and SMS notifications

There are umpteen fantastic reasons for your child to have a mobile device: From letting you stay in touch with them, to access the web for school projects, to simply fitting in with their friends. The flipside to this, however, is an unacceptable level of danger – from the cyber bullying and online sexual abuse, to sexting, accessing adult content and spending too much time and money on their phones.

Key Benefits

The reality is, everyone from bullies to paedophiles like their smartphones and tablets just as much as everyone else. There are so many reasons to get your child a smart device, from keeping in touch to helping with homework, but you want to make sure they are safe from dangerous people. Using Mobiflock My Child mobile parental controls lets you monitor and block undesirable contacts, and still allows kiddo to have the smartphone or tablet of their dreams - safely.

Web Blocking: Stop your child accessing pornography and other inappropriate web content * Limited service on Blackberry

Application Blocking: Know which mobile applications your child has installed and block or limit their use.

Maps: Locate a missing child or phone. Also see where your child has roamed with their smart device.

Timetable: Allocate times when you child can and can not use their smartphone or tablet. They will always be able to call their VIP contacts

Block Contacts: Prevent undesirable or unknown people from being in contact with your child, either by calling or text.

Ban Camera Use: You can stop the phone's camera being used, helping prevent sexting or the sharing of other inappropriate photos & videos.

Receive Alerts: Receive alerts by text or email about dangerous activity, such as access adult content on the mobile device.

How does it work?

Mobiflock hooks into the low-level operating systems of the smartphone in order to filter and, if necessary intercept and block voice and data traffic to and from the handset as well location information. Depending on the specific product, Mobiflock consists of an application that is installed on the phone, or a very light-weight app on the phone managed via a web-based dashboard.
