How To Keep Your Family Safe Online

Clear Computing's '6 Simply Steps To Ensure You Stay Safe Online'

Step 1:

Make sure your password is difficult to crack. This means that it should be something significant to only you! Mix it up by replacing letters with numbers.

Step 2:

Do not give out persona information unless you are a 100% sure you are on a trusted site. The same goes for chat rooms, make sure you use a nick name or a different name altogether so you are untraceable.

Step 3:

Ensure you are using an anti-virus, spyway and a firewall. These will help with preventing unwanted threats.

Step 4:

Configure your browsers or activate parental control to filter out or block in appropriate content.

Step 5:

When using a public wireless network,make sure to turn off file sharing and network discovery.

Step 6:

Only open attachments from people you can trust. Anything else should be viewed as a threat.
