Protecting your critical systems

Are you prepared for downtime?

How would you cope without your IT systems? What if you couldn't access important emails or files? You could lose sales, customers, time and money.

Managed Continuity helps you to protect your systems, minimise data loss and keep your business running by:

- Monitoring the status of your IT
- Building a clear picture of your systems
- Analysing risks
- Producing regular reports
- Highlighting potential issues

- Providing back up services
- Giving you quick, flexible access to data
- Minimising downtime
- Providing support to get you up and running

This keeps you connected to your data so you can grow your business and increase your revenue.

THE SOLUTION

We will monitor, fix and analyse your IT systems. 24/7.

Managed Continuity consists of three separate services that can be built up over time to give your critical IT systems full protection and support.

AVAILABILITY MONITORING	RECOVERY MANAGEMENT	SYSTEMS RISK CONSULTING
Anti-virus, connectivity and back-up	Data, archive and continuity services	Quarterly risk audit
Regular reports and health checks	Vulnerability and virus management	Planning and testing
Keeps you connected	Gets you up and running	reduces risk of downtime

You can build up your protection a step at a time - or take all three services for maximum protection, ensuring continuous availability of your critical business functions in the event of major IT issues.

Clear Computing Ltd.
